

HW 11/11

Emilio Horner

2022-11-11

1. I want to learn the R basics and become more familiar with it. I will revisit the Modern Dive book over winter break just to feel a stronger sense of the foundational coding part of the course.
2. I want to better understand what ULAM is doing and how MCMC works on both a conceptual and more practical level.
3. I want to revisit the data visualization and GGplot concepts. I want to know when to use which graph for what type of data and how to code it.
